

OCS-EPIC & OCS-OASIS

Your Complete OBQI & PI Solution

**CAHC Exclusively Endorses OCS as the
Recommended Benchmarking & Outcomes
Vendor for Their Members**

Use OCS-EPIC to facilitate your Performance Improvement efforts

The **OCS-EPIC** program acts as your in-house consultant by comparing your data to various benchmark norms, identifying and prioritizing successes and opportunities for improvement, and recommending target outcomes for your agency. **OCS-EPIC** then facilitates the outcome enhancement process and tracks your progress for you.

“OCS-OASIS is very sophisticated with many drill-down options. It’s like a candy shop...so many delectable data to group meaningfully.”

*Gwendolyn Smith,
OBQI Nurse Program Manager for
the VNA of Southeast Michigan*

Use OCS-OASIS to delve into your outcomes data

OCS-OASIS acts as your analytical tool by allowing you to drill down into your outcomes and utilization information to identify the root of a quality issue or the source of a particular success. Look at your patient outcomes by diagnosis, HHRG, clinician, referring physician, or a combination of these and others in order to better focus your improvement efforts.

Benchmark Subsets of Patients

Organizations that utilize both **OCS-EPIC** and **OCS-OASIS** will gain access to OCS’ latest benchmarking development—Benchmark Data Drill-Down. This is the only benchmarking tool in the industry that allows agencies to compare the functioning of a specific subset of patients according to their characteristics including, but not limited to items such as primary diagnosis, case weight range, payer source, caregiver status, inpatient facility discharge, presence of a surgical wound or pressure ulcer, therapy need, or all of the above.
